Scholarly communication is becoming increasingly digital; this revolutionary shift to new ways of creating, using and storing knowledge creates a range of opportunities for universities. How can faculty, librarians and technologists collaborate to use digital technology for the benefit of academe and society?

Participants in this symposium, the fifth in a series of conferences on innovative digital topics hosted by the Emory University Libraries, will explore emerging synergies among faculty members and librarians who are jointly expressing knowledge in innovative ways through digital scholarship and library systems. This symposium seeks to promote a better understanding of the impacts of and the best practices for such collaboration. Topics will include

- The transformational impact of digital media on scholarly communication.
- The roles that digital library systems undertake to build and sustain our scholarly cyberinfrastructure.
- Strategies for successful collaboration among faculty, librarians, and technologists.

Keynote Speaker Geoffrey Rockwell, Ph.D., of McMaster University, is a leading Canadian researcher in electronic text analysis. Rockwell also is a project leader of the Text Analysis Portal for Research (TAPoR), funded by the Canada Foundation for Innovation.

Registration is $200 through Friday, November 2, 2007, and includes breakfast and lunch.
